Final Project Details

Final Project Details

In this course, you will act as a junior data analyst hired to support the growth of a new company. You will assess the existing infrastructure, apply appropriate changes to its database, and present insights to stakeholders that are overseeing your work. You will write multiple queries (20+) ranging in complexity to assess your MySQL skills. This project will demonstrate your ability to use SQL to analyze data, and can serve as a tool to showcase your learning to others, including future employers.

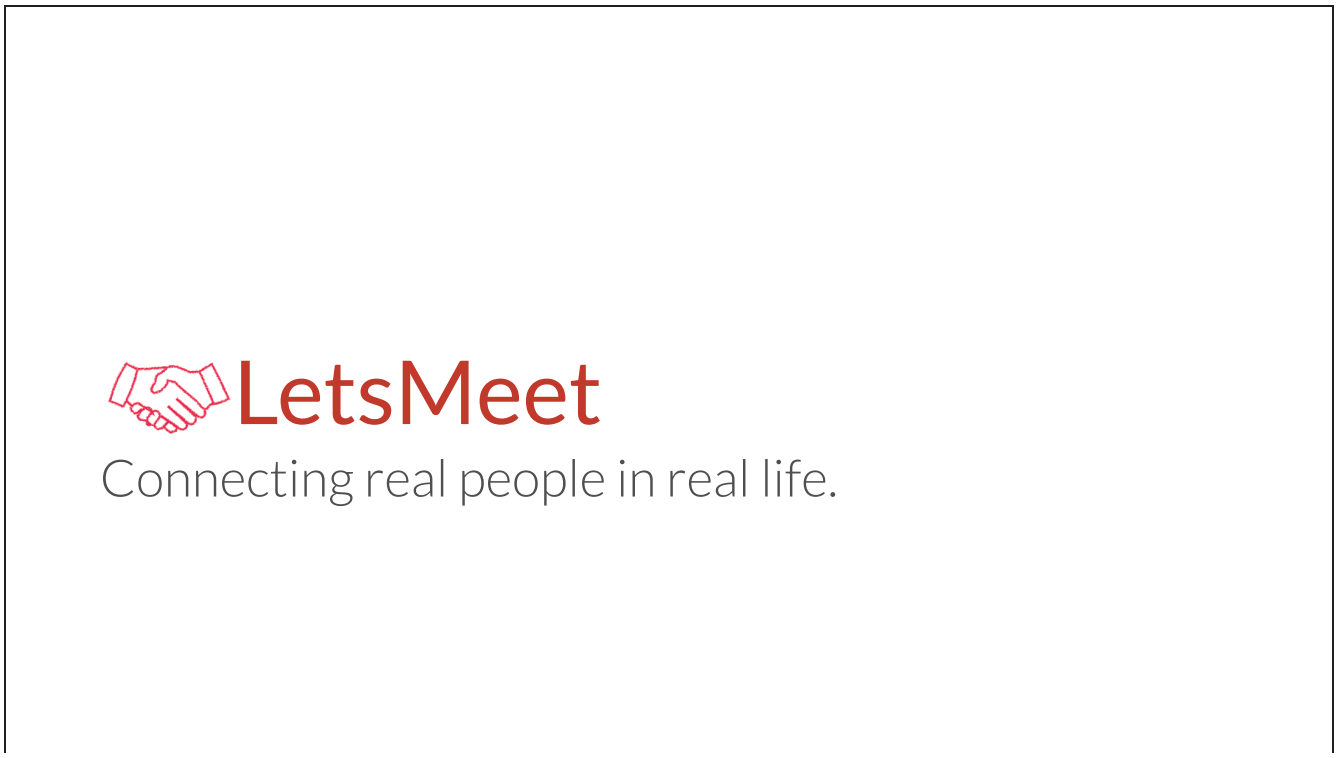

This final project is broken down into four parts:

1. **Part 1:** SQL scripts containing the DDL and DML queries you created for your analysis
2. **Part 2:** Written reports that summarize key information and insights for your manager
3. **Part 3:** An entity-relationship diagram (ERD) of your updated database
4. **Part 4:** A final SQL technical assessment, which mirrors the types of assessments you will be asked to do during job interviews

Your job in completing these project parts will be to support the growth of LetsMeet. LetsMeet is a fictional website that provides a platform for users to create and search for real-world events that match their interests and location. You will use your SQL skills to write queries that provide insights into who

LetsMeet members are and how they use the platform. Learn more about the fictional platform and the organization you will work with in your final project in the following slide deck.

Final Project Case Study

For a more detailed breakdown of how you will complete the final project in this course, refer to the information in the following dropdowns. This information will be available to you throughout the course.

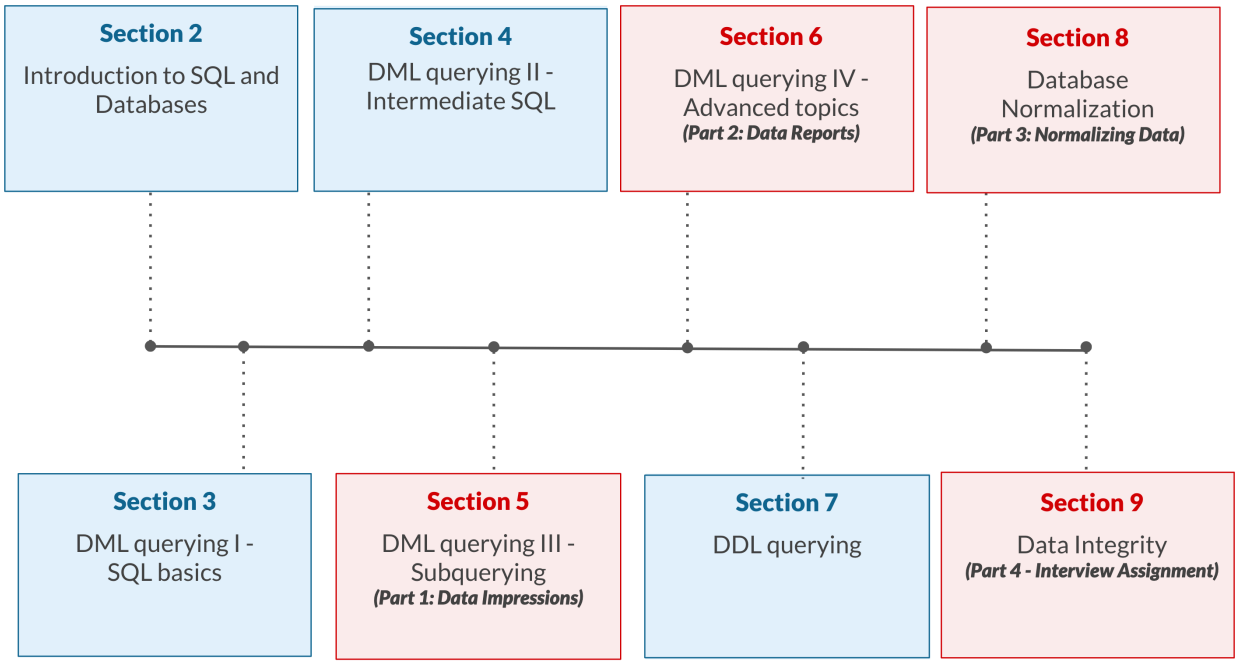

FINAL PROJECT COMPONENTS

There are four graded parts in the final project. These parts are spread out over the course:

- **PART 1:** Data Impressions
- **PART 2:** Data Reports
- **PART 3:** Normalizing Data
- **PART 4:** Interview Assignment

The following roadmap provides an overview of the final project broken down throughout the course.
